

Mappt™

Mapping Better

AGRICULTURE

Sow the seeds for successful mapping with our easy, intelligent, offline mobile GIS

POLYGONS

Document your crop status by outlining your fields and allocating various colours and attributes

OFFLINE CAPABILITY

Remote farms don't rely on the internet, and neither does Mappt™ with its full offline capability

GEOTAGGED PHOTOS

Perfect for flagging hazards or findings that you want to return to in the future

GPS TRACKING

Use offline GPS tracking and the polylines feature to track where you're dusting your crops

GEOFENCING

Stay off land you do not want to disturb, e.g. land with a biosecurity risk, with alerting geofences

COMPACT & MOBILE

Unlike heavy farming machinery, Mappt™ is used on a light, compact Android device

With Mappt™ there is no vendor lock in, so it works with all major GIS applications

TESTIMONIAL

"This Android app is exactly what I have been looking for. It's a dream software for our research and a brilliant app for the regular work of irrigation associations in Taiwan."

Chih-Hung Tan
Senior Scientist & Division Chief
